

VScom Serial Device Servers: Can I put 15 server NetCom 113 in the same pc?

The driver for NetCom Virtual Com Ports do not put a limit to the number of NetCom servers or serial ports installed this way.

The only existing limit is given by Windows itself. The maximum number of Com Ports in a system is 256, no matter based on which type of hardware. Com1 and Com2 is often reserved for standard ports, up to 254 Com Ports may be added.

So there is no problem to install 15 NetCom 113 with one serial port, making Com3 to Com17.

There is also no problem to install several multi-port NetCom together with NetCom 113, to have even more Virtual Com Ports.
