

*OnRISC: I have successfully used 2GB and 4GB microSD cards.  
Is it possible to use microSD cards with bigger capacity?*

The built-in Secure Digital (SD) card controller is [SDHC](#) capable. According to [SD Association](#) up to 32GB are possible. Since there were no problems with 4GB card (already SDHC), there should be no problems to use 8GB, 16GB etc.
