

## *OnRISC: How to force thorough file system check for the microSD/CF card?*

To check the file system make following steps:

1. Enter BIOS-→System Console

2. execute e2fsck for desired medium

- for internal microSD card execute `e2fsck -fy /dev/sda1`

## *OnRISC: How to force thorough file system check for the microSD/CF card?*

- for CompactFlash card execute `e2fsck -fy /dev/hda1`

Â

After checking your medium reboot the system. The `-fy` option means `-f` (force checking) and `-y` (assume an answer of `'yes'` to all questions). For more information about `e2fsck` see its man page <http://linux.die.net/man/8/e2fsck>
