

PCI/ISA/PCMCIA to Serial: Where can I find the drivers?

The drivers are available in the [download](#) area.

The VScom PCI cards all use the same driver files, so it does not matter for what model you download the files. Even old and long time phased out PCI cards are still supported by these drivers. There is no firmware for these cards.

Also the NetCom Serial Servers all use the same driver files, so again it does not matter for what model you download the files. Of course the firmware is different, i.e. specific for the model. Be sure to load the correct file.

As you might expect now the VScom USB-COM devices all use the same driver files. Only the USB-COM PRO models have additional software for configuration.
